

Superstore Sales Performance Dashboard

Data Analysis & Business Insights — Week 4 Project

AnalystLab Africa Internship Program

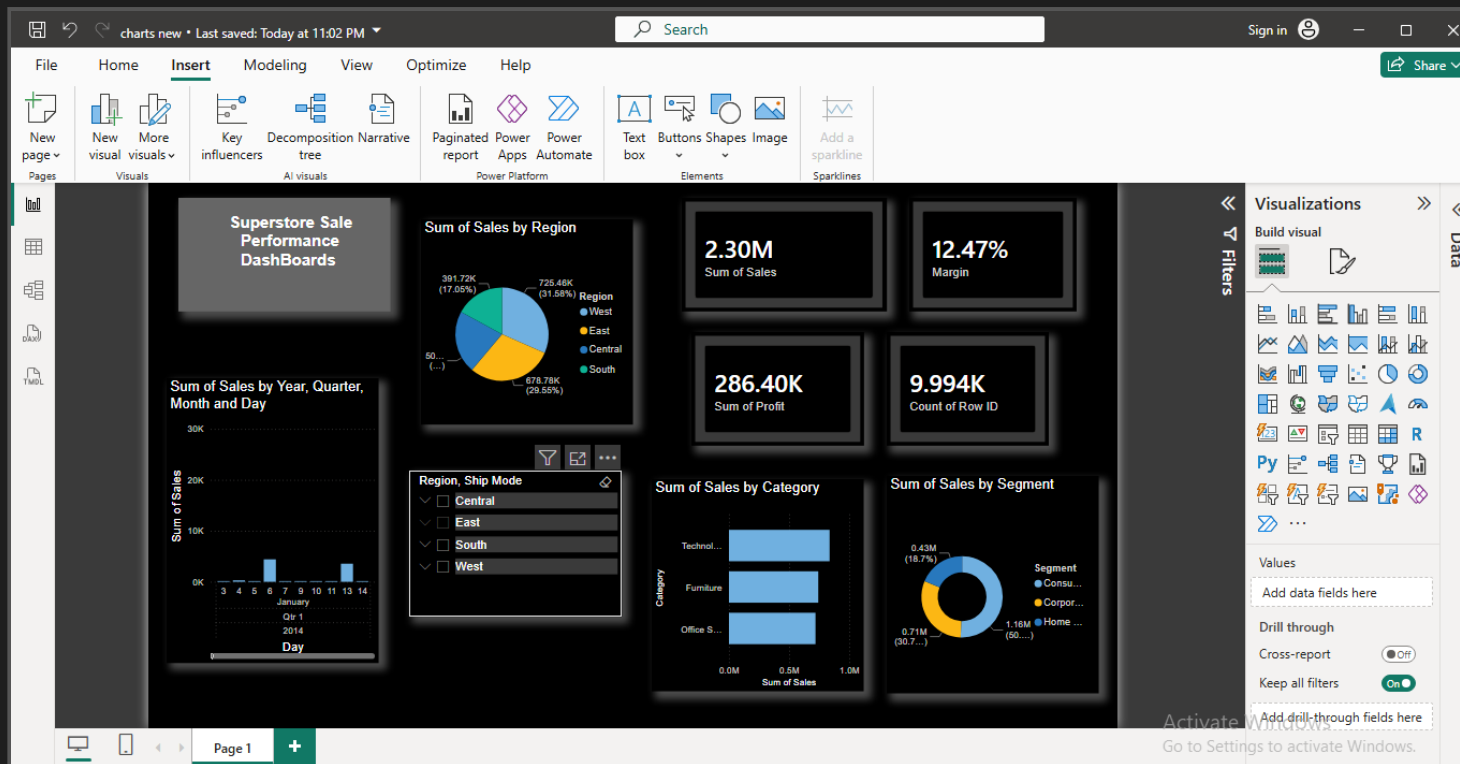

Project Overview & Objectives

- **Dataset:** Sample - Superstore Dataset (9,994 records)
- **Tools Used:** Microsoft Power BI
- **Objectives:**
 - Analyze sales performance, profit margins, and regional distribution.
 - Build an interactive, real-time filtering dashboard.
 - Extract actionable business insights for decision-makers.

Key Performance Indicators (KPIs)

- **Total Sales / Revenue:** \$2.30M (\$2,297,200.86)
- **Total Profit:** \$286.40K (\$286,397.02)
- **Overall Profit Margin:** 12.47%
- **Total Records / Rows:** 9,994

Dashboard Overview

- Interactive Slicers (Region & Ship Mode filtering) applied successfully.
- KPI Cards, Category/Segment breakdowns, and Regional distribution implemented.

Key Business Insights

- **Top Category:** Technology generated the highest sales (\$836.15K) and highest profit margin (17.40%).
- **Top Region:** The West Region led total sales (\$725.46K / 31.58%) and maximum overall profit (\$108.42K).
- **Low Margin Alert:** Furniture generated substantial sales (\$742K) but an extremely low profit margin of 2.49% due to high discounts.

Recommendations & Conclusion

- **Optimize Furniture Category:** Reduce heavy discounting on furniture items to improve overall profit margins.
- **Focus on West & East Regions:** Replicate successful marketing strategies from the West and East regions to boost Central and South regions.
- **Conclusion:** Interactive Power BI dashboard successfully enables stakeholders to monitor KPIs and track sales performance dynamically.
